FDA Approved XEOMIN® Cosmetic

The Botox® Alternative is here!

Xeomin® blocks nerve transmission to muscle cells. As a result, those muscle fibers contract much less and no longer cause furrowing or “dynamic lines” to occur in the treated area. Xeomin® is similar to “Botox®” made by the Allergan company in that the important protein which blocks nerve transmission is intact, there are just less protective proteins surrounding the active Xeomin® molecule.

For patients who are unaffected by Botox® or who have developed tolerance to the drug, as well as new patients who have not had either previously, Xeomin is an exciting new cosmetic drug to treat frown lines and facial aging.

Patients will receive a Merz Aesthetics branded \$50.00 prepaid VISA card with the purchase of 30 units or more. Complete a brief on-line survey and receive your card within 6-8 weeks by mail, that can be used for your next treatment or product purchase at our office. Rush in as supply is limited.
